

Great Testimony against scientific cruelty

Vivisection is a pejorative term used by opponents of the practice of performing operations on live animals for the purpose of physiological or pathological research. While opposition to the use of living animals for experimentation is most often associated with PETA [People for the Ethical Treatment of Animals, founded in 1980], opposition to use of live animals in physiology research dates back several centuries. Animal experimentation was particularly decried before the development of anesthesia. This book briefly describes the personal histories of twelve prominent critics of live experimentation in 19th century England. - Summary by JefferySmith
